

MWF 12:00 pm–12:50 pm

MWF 1:00 pm–1:50 pm

Instructor: Mark FloryanEmail: mfloryan@cs.virginia.edu

Office: Rice Hall 203

Office Hours: TBD. See course website

Teaching Assistants: See course website. Office hours will be done in-person.**Course website:** <https://markfloryan.github.io/dsa2/> (We will also use Collab.)**Prerequisites:** CS 2120 (or equivalent) and CS 2100 (or equivalent) with grades of C- or higher, and math knowledge from APMA 1090 or MATH 1210 or MATH 1310. (Prerequisites are important to this course and will be enforced!)

Overview

Course Description: Builds upon previous analysis of algorithms and the effects of data structures on them. Algorithms selected from areas such as searching, shortest paths, greedy algorithms, backtracking, divide-and-conquer, dynamic programming, and machine learning. Analysis techniques include asymptotic worst case, expected time, amortized analysis, and reductions.

Availability: It is important to us to be available to our students, and to address their concerns. If you cannot meet with either of us during our office hours, e-mail us and we will find the time to meet. That being said, like everybody else we are quite busy, so it may take a day or more to find a time to meet. And if you have any comments on the course—what is working, what is not working, what can be done better, etc.—we are very interested in hearing about them. Please send Prof. Floryan or one of the TAs an e-mail or post privately on Piazza to the instructors. When sending email, include “CS3100” in the subject line. If your question could be answered by either professor or even a TA, a post on Piazza to “instructors” may get a faster response.

Course Objectives: Students who complete the course will:

- Comprehend *fundamental ideas in algorithm analysis*, including: time and space complexity; identifying and counting basic operations; order classes and asymptotic growth; lower bounds; optimal algorithms.
- Apply these fundamental ideas to *analyze and evaluate important problems and algorithms* in computing, including search, sorting, graph problems, and optimization problems.

- *Apply appropriate mathematical techniques in evaluation and analysis*, including limits, logarithms, exponents, summations, recurrence relations, lower-bounds proofs and other proofs.
- *Comprehend, apply and evaluate the use of algorithm design techniques* such as divide and conquer, the greedy approach, dynamic programming, and exhaustive or brute-force solutions.
- Be exposed to the fundamental ideas related to the *problem classes NP and NP-complete*, including their definitions, their theoretical implications, Cook's theorem, etc. Be exposed to the design of polynomial reductions used to prove membership in NP-complete.

Textbook: *Introduction to Algorithms, Third Edition* by Cormen, et. al. (ISBN 0262033844). UVA Library makes a digital version of our textbook available online at <https://search.lib.virginia.edu/catalog/u6757775>

Additional Resources: We will make additional optional textbooks and resources available on the course website.

Class Delivery and Covid-19:

Lectures and quizzes will be given in-person. (If the university changes its policy due to changing circumstances, this may change. We will follow university guidance in such matters.) We will do our best to make recordings of lectures available on the Collab site.

We will follow the university's guidance on dealing with Covid, including wearing masks while indoors. See the course website's page on the course's policies on dealing with Covid-19.

Coursework and Grading

The course is divided into 8 **modules**:

- Graphs - Introduction
- Graphs - Advanced
- Divide and Conquer Algorithms
- Greedy Algorithms
- Dynamic Programming
- Network Flow & Bi-Partite Matching

- NP-Completeness
- Machine Learning

Most modules are 5 lectures worth of content (but a few are 4 or 6). The schedule is shown on the website. For each module, there will be:

- 1 or 2 homeworks (written or programming)
- 1 quiz

Quizzes: Each quiz is a short assessment of your knowledge of a module. So quizzes are meant to ensure you clearly demonstrate competence regarding the individual topics for that module. You will have multiple opportunities to take each quiz (3 attempts for most, but later quizzes may only have 2 attempts).

Quizzes will be given in-person in your scheduled lecture time as follows:

Mon, Sep. 26	Mod 1-2 (first attempts)
Mon, Oct. 24	Mod 1-2 (second attempt), 3-4 (first attempt)
Fri, Nov. 18	Mod 3-4 (second attempt), 5-6 (first attempt)
Mon, Dec. 5	Mod 5-6 (second attempt), 7-8 (first attempt)
Final Exam period, TBD	Mod 1-8 (final attempts)

Quiz Makeup Policy: Quiz makeups, in general, will not be allowed for any reason. The quizzes are designed such that each student is entitled to more than one attempt at each quiz. Therefore, if a quiz is missed for any reason AND the student still has more than one attempt at the quizzes in question available then no makeup will be provided.

However, if a student misses quizzes to a point that only one attempt is available at any given quiz, then a makeup quiz can be scheduled so that everyone has more than one attempt at every quiz. The student should contact the instructor to schedule this makeup.

Homeworks: Homeworks fall into two categories: “written” and “programming.” Programming homeworks can use Python, Java or C++. Some assignments may require a write-up in addition to code. Written homeworks may include small problems, runtime analysis, proofs, etc. See section about L^AT_EX below.

Grading: This course has a system for determining grades that is unlike many courses, and is fully explained on the course website under “Course Logistics.” Full details are explained there, but here are the major points.

- We will use a grading approach based on an approach called *mastery learning*. Our approach tries to model the CS department’s official policy on what course grades should mean, found at <http://ugrads.cs.virginia.edu/grading-guidelines.html>
- Quizzes are scored at one of three levels: incomplete, pass, or high-pass.
- Homeworks are scored at one of two levels: incomplete or pass.
- With some limitations, a quiz can be re-taken or homework can be re-submitted to earn a higher score.

- To pass a module, you must pass the module's homework (all of them) and get a pass or high-pass on its quiz. There is a second way to pass a module: If you high-pass the quiz, but don't pass one or more homework for that module, then the module is considered passed.
- To high-pass a module, you must pass all of the homework for that module AND high-pass the quiz for that module.
- Your final letter grade is determined by how many modules you pass. Also, earning high-passes on modules can raise your grade a bit more.
- The website has a table showing what you need to achieve to reach a particular letter grade.

This system is unlike that of most courses in CS you've taken, and we expect you will have questions throughout the semester. We believe it will benefit students in the course. We'll do our best to clear up any confusion throughout the course. We do reserve the right to tweak this grading system in small ways if we think it will correct a problem or better serve the class as a whole.

L^AT_EX: Written assignments must be typeset with L^AT_EX, a professional formatting system. Tutorials on how to use L^AT_EX will be made available when the first written problem set is released. L^AT_EX is easily installable on many computers:

- Overleaf, <http://overleaf.com>: a Web-hosted L^AT_EX editor which behaves much like Google Docs.
- Cygwin has L^AT_EX packages that can be installed
- MiKTeX provides a stand-alone installer for Windows and Mac, miktex.org
- Ubuntu and CentOS provide TeXLive packages in their repos
- LyX, TexShop, TeXworks, and TeXStudio are GUI editors available either through the MiKTeX and TeXLive repos or available as separate downloads.

We strongly recommend using Overleaf, <http://overleaf.com>, since it contains all the necessary packages and works in-browser. We generally will not accept L^AT_EX documents with images of text or formulas; **you must typeset the formulas in L^AT_EX**, not in another program and have them exported as images.

Submission System: All homeworks will be submitted via GradeScope. Details will be explained later in the course.

Homework Late Policy: For homeworks, there will be a suggested date to submit each homework (before the first attempt at the quiz on that module). Any homework can be submitted as late as the deadline posted on the course website (near the end of the semester).

Regrades: We believe that the re-submission policies in this course will make re-grade requests much less frequent. However, if you believe a quiz or homework was not graded

correctly, we will allow you to make such a request. The exact procedure and policy will be announced later in the term.

Collaboration Policy

Quizzes: Quizzes are always individual assignments; collaboration with others is not allowed. Any solutions that share similar text or code will be considered in breach of this policy.

Homeworks: You are encouraged to collaborate with up to 4 other students in the course on each homework, but all work submitted must be your own independently written solution. While you may discuss techniques and collectively solve the problems in your group, you may **not** share any files or look at each others' write-up or code. For instance, sharing source code files or Overleaf or Google Docs is **not** allowed. Likewise, pair programming or sharing the debugging of code are **not** allowed. Any solutions that share similar text or code will be considered in breach of this policy. You **must** list the names and computing IDs of all of your collaborators in your submitted `tex`, `py`, and `java` files.

We encourage you **not** to seek published or online solutions for any assignment, since this is not a good way to learn. Studying code online is permitted, but only for getting ideas about how to address a programming solution. Copying or reusing code from an online source violates the honor pledge for that homework. You must cite sources of any online code you use in this way in a comment in your source file(s)

Any submission which is discovered to be similar to a published solution or one found online will be considered in breach of this policy.

Note that it is a violation of this policy to submit a problem solution that you are unable to explain orally to a member of the course staff, and we reserve the right to spot-check for this requirement and to use tools like `moss` etc. to detect shared code.

Penalty: Assignments or quizzes where violations of this policy occur will receive a **zero** grade for that entire MODULE. Second infractions will result in a **failing (F)** grade in the course. Any infractions will also be submitted to the Honor Committee if deemed appropriate.

Additional Information

Special Circumstances: The University of Virginia strives to provide accessibility to all students. If you require an accommodation to fully access this course, please contact the Student Disability Access Center (SDAC) at (434) 243-5180 or sdac@virginia.edu. If you are unsure if you require an accommodation, or to learn more about their services, you may contact the SDAC at the number above or by visiting their website <http://studenthealth.virginia.edu/sdac>.

For this course, we ask that students with special circumstances let us know as soon as possible, preferably during the **first week of class**.

Religious Accommodations: It is the University's long-standing policy and practice to reasonably accommodate students so that they do not experience an adverse academic consequence when sincerely held religious beliefs or observances conflict with academic requirements. Students who wish to request academic accommodation for a religious observance should submit their request in writing to Prof. Floryan as far in advance as possible. If you have questions or concerns about academic accommodations for religious observance or religious beliefs, visit

<https://eocr.virginia.edu/accommodations-religious-observance>

or contact the University's Office for Equal Opportunity and Civil Rights (EOCR) at UVAEOCR@virginia.edu or 434-924-3200. Accommodations do not relieve you of the responsibility for completion of any part of the coursework missed as the result of a religious observance.

Safe Environment: The University of Virginia is dedicated to providing a safe and equitable learning environment for all students. To that end, it is vital that you know two values that we and the University hold as critically important:

1. Power-based personal violence will not be tolerated.
2. Everyone has a responsibility to do their part to maintain a safe community on Grounds.

If you or someone you know has been affected by power-based personal violence, more information can be found on the UVA Sexual Violence website that describes reporting options and resources available – www.virginia.edu/sexualviolence.

As your professor and as a person, know that we each care about you and your well-being and stand ready to provide support and resources as we can. As a faculty member, we are responsible employees, which means that we are required by University policy and federal law to report what you tell us to the University's Title IX Coordinator. The Title IX Coordinator's job is to ensure that the reporting student receives the resources and support that they need, while also reviewing the information presented to determine whether further action is necessary to ensure survivor safety and the safety of the University community. If you would rather keep this information confidential, there are Confidential Employees you can talk to on Grounds (See http://www.virginia.edu/justreportit/confidential_resources.pdf). The worst possible situation would be for you or your friend to remain silent when there are so many here willing and able to help.

Well-being: If you are feeling overwhelmed, stressed, or isolated, there are many individuals here who are ready and wanting to help. The Student Health Center offers Counseling and Psychological Services (CAPS) for all UVA students. Call 434-243-5150 (or 434-972-7004 for after hours and weekend crisis assistance) to get started and schedule an appointment. If you prefer to speak anonymously and confidentially over the phone, Madison House provides a HELP Line at any hour of any day: 434-295-8255.

Syllabus Note: This syllabus is to be considered a reference document that may be adjusted

throughout the course of the semester to address necessary changes. This syllabus can be changed at any time without notification; it is up to the student to monitor the website for news of any changes. Final authority on any decision in this course rests with the professor, not with this document.

Research: Your class work might be used for research purposes. For example, we may use anonymized scores from student assignments to compare to other student performance data. Any student who wishes to opt out can contact the instructor or TA to do so after final grades have been issued. This has no impact on your grade in any manner.
